More than 37 years ago the company Klaus F. Meyer GmbH (KFM) based in Fussgoenheim in the Palatinate was founded. In this period of time the company developed from a one-man business to a renowned supplier of chemical raw materials, fine chemicals, chemical intermediates and chemical specialties for pharmaceutical, photographic, agricultural, paints & coatings, fragrances, cosmetic, textile and general chemical industry.

In the beginning of the century KFM understood that business was booming in many sectors in China. This was also reflected in the chemical industry. So already in 2004 KFM founded an own office in Shanghai-Puxi, China where two Chinese employees are successfully sourcing chemical raw materials. Nowadays about 66 % of all purchased products are imported from China.

More than 200 customers in more than 40 countries around the world, including many well-known chemicals industry companies in Germany, Europe and elsewhere show that the Klaus F. Meyer GmbH is one of the leading suppliers for chemical raw materials, intermediates, and special chemicals.

As a trading company, Klaus F. Meyer GmbH specializes in two types of business: As part of traditional warehousing business, the company supplies customers worldwide from its warehouses in Rotterdam, Hamburg, Forst and Limburgerhof. On the other hand, it conducts direct business without any intermediate stage between

the producer and customer.

Another special-feature of the company are door-to-door deliveries in Isotank containers from China including dangerous goods (corrosive, toxic, etc.), in order to keep the entire logistics under their own control. A fixed and much honored basic principle of the company is that only laboratory tested chemicals are used. KFM also perform quality audits regularly at the manufacturer's sites to guarantee high quality standards as well as environmental and health and safety aspects towards the customers or in other words constant customer service.

The company is built on a good and secure basement and is excellently equipped to tackle the tasks ahead of it and the future.

The company's policy is based on long standing business relationships with customers and suppliers of the major chemicals industry throughout the world. That also includes integrity, honesty, reliability and responsibility.

Please note that this delivery program is just a selection of products we can deliver. If you need any other product which is not listed here just contact us and we will do our best to satisfy your needs.

REACH is fully implemented in the EU now. That means all materials imported or manufactured in the EU in quantities of more than 1 t/year have to be registered with ECHA before import. Klaus F. Meyer has registered together with his partners about 45 products and is still working on the registrations of new substances.

All materials we import are labelled properly according to CLP. We instruct our non-EU manufacturers how to do and send the appropriate labels before shipping. MSDS are prepared from a specialized safety and health bureau.

For the special requirements of dangerous goods we have an own employee trained as Hazardous Goods Advisor in our head office.

High priority is given in quality assurance which is proved by our recurring certification in ISO 9001:2015. By voluntarily participating in the „Responsible Care“ program, KFM has committed to act responsibly in the chemicals trade. The according certificates are available via download from our website:
